HAZARDOUS DUST

PROTECT WHAT MATTERS

Solutions for a safer workplace

THE SMALLEST DUST CAN POSE THE GREATEST THREAT

SUPERIOR SAFETY

Nilfisk dust extractors do more than provide ideal work conditions. Our durable, reliable filter bags ensure safe and simple disposal once the job is done.

With dependable, innovative filtration, robust design, and H-class certification, you can rest assured that your operation has the best possible resources at hand to prevent hazardous dust from posing a threat to not only you, but also your colleagues and work environment.

EASY HANDLING AND TRANSPORT

Built to keep your operation running smoothly, all Nilfisk models offer flexible storage solutions for the tools and accessories you need on the job:

- Easy attachment of tube, hose, and power cord
- Flat top for storage of safety gear, accessories or power tools when not in use
- Vacuum-top adapter plate for toolbox mounting
- Big wheels, stainless steel casters and the optional trolley handle mean transport is easy

MINIMISING RISK

Hazardous dust is divided into 3 classes:

H (high-risk)

M (medium-risk)

L (low-risk)

H-class dust particles, which can cause severe health problems, are invisible to the naked eye - but not to Nilfisk dust extractors.

The serious concerns associated with H-class dust are easy to manage with our specialised, innovative filtration and containment solutions.

Nilfisk recommends using a H-class dust extractor for any process that may generate hazardous dust.
